DETAILED ACTION

1. Claims 1-21 are presented for examination.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a storage device having a lateral storage director, wherein said storage director has a capability of communicating with a lateral storage director of another storage device via said communication link, classified in class 711, subclass 112.
 - II. Claims 9-19, drawn to a method of moving data files from a first storage device having a lateral storage director directly to a second storage device having a lateral storage director via a communications link, classified in class 711, subclass 151.
 - III. Claims 20-21, drawn to a method of initializing a first storage device having a lateral storage director, classified in class 711, subclass 111.
3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of

using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process such as a method of directly moving data files from a first storage device to a second storage device having a lateral storage director via a communications link comprising querying said lateral storage director of said second storage device for available storage space without receiving an interrupt request in first said storage device.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process such as a method of initializing a first storage device having a lateral storage director, which simply initializes the first storage device without sending, receiving and compiling steps as recited in Group III.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as initializing the storage device having a lateral storage director without directly moving data files from a first storage device to a second storage device having a lateral storage director via a communications link. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for (i) Group I is not required for Group II and Group III; (ii) Group II is not required for Group I and Group III; and (iii) Group III is not required for Group I and Group II, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hetul Patel whose telephone number is 571-272-4184. The examiner can normally be reached on M-F 8-4:30.
